Dev Ganugapenta

West Palm Beach, FL · Remote (US)

Senior Full Stack Engineer · AI & LLM Applications

dganuga@gmail.com linkedin.com/in/dev-ganuga-4b3b6431a github.com/DevGanuga initdev.co/talent/dev-ganuga

Senior Full Stack Engineer who owns production systems end to end: React and Next.js frontends, Node.js and Python backends, PostgreSQL, and LLM applications on OpenAI and Anthropic. Over the last year, built four startup products from zero to production as lead or sole engineer — two generating revenue, one live pre-launch, one at investor demo — and led full-stack delivery for Limpid&Co (Amsterdam), including a platform presented at Web Summit 2025.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React 19, Next.js (App Router, Server Components, Server Actions), TanStack Router, TanStack Query, TanStack Form, TanStack Table, Tailwind CSS, Framer Motion, TipTap, React Hook Form, Zod, Zustand

Backend & APIs: Node.js, Fastify, Next.js route handlers, Python, REST, GraphQL, OpenAPI specifications, contract-first API development, API code generation, signed and idempotent webhooks, background jobs and cron

Data: PostgreSQL (schema design, migrations, row-level security, performance tuning), Prisma, Drizzle ORM, Redis, NoSQL, Supabase, Pinecone vector search

AI / LLM (Artificial Intelligence): OpenAI and Anthropic APIs (GPT-4o, Claude), Gemini, LLM application architecture, RAG systems and embeddings, structured output and tool calling, streaming, retry/backoff and fallback design, agent workflows (LangGraph, n8n), PyTorch, generative image and video (fal.ai, Tavus), human-in-the-loop review systems

Event-Driven & Workflow Systems: Kafka, event-driven architecture, idempotent event processing, workflow-driven applications, operational consoles, enterprise business tooling

Identity & Security: OAuth 2.0, Azure AD, SSO, RBAC, Clerk, Supabase Auth, multi-tenant data isolation, PHI-aware data handling

DevOps & Observability: Docker, Kubernetes, Azure DevOps, ArgoCD, CI/CD pipelines, Vercel, OpenTelemetry, distributed tracing, Sentry, Playwright

Payments: Stripe (subscriptions, checkout, customer portal, tiered and usage-based pricing), credit ledgers with escrow and automatic refunds, idempotent webhook processing

Domain: Healthcare and regulated industries (clinical triage pipeline with PHI handling, healthcare revenue operations), compliance-aware system design, open-source ecosystems

EXPERIENCE

Senior Full Stack Engineer · Independent Contractor

2025 – Present

Remote · Contract full-stack and AI engineering; the engagements below were delivered through this practice.

- Built four startup products from zero to production as lead or sole engineer: two generating revenue, one live pre-launch, one at investor-demo stage.
- Led full-stack delivery for Limpid&Co (Amsterdam): AI Navigator, Company Challenges, and the Phase 2 production program that followed Web Summit 2025.
- Scope on every engagement: architecture, data model, API design, frontend, deployment, observability, and production support.

Lead Full Stack Engineer (Contract) · Limpid&Co

Oct 2025 – Jun 2026

Remote · Amsterdam, NL · AI Navigator, Company Challenges, and the Phase 2 production program for one enterprise client.

- Lead full-stack engineer across all Limpid&Co production software, Oct 2025 – Jun 2026.
- AI Navigator (navigator.leadingwith.ai): built the full platform on Next.js, TypeScript, and PostgreSQL. GPT-4o assistant with in-app tool calling, 25-zone sentiment engine over 1,000+ employee survey responses, 8-dimension capability maturity model with benchmark scoring and automated gap detection, enterprise auth. Live in production; presented at Web Summit 2025.
- Wrote the Phase 2 production proposal — scope, team structure, budget — and won the follow-on contract.
- Company Challenges (companychallenges.com): built the full platform. Authored content is separated from cohort instances so a challenge is written once and run across any number of cohorts. TipTap rich-text authoring, Stripe billing, Resend transactional email, Vercel cron lifecycle automation.

- Owned production support: traced an aggregate-query outage to a PostgREST regression after a Supabase upgrade and shipped the fix the same day.

Full Stack Developer (Contract) · Dyia May 2026 – Jun 2026

Remote · AI business operating system for the trades. Built from zero; live with paying subscribers. dyia.io

- Primary engineer (~82% of commits). Built Dyia from a blank repo to a live SaaS with paying subscribers in two months.
- Product surface: real-profit job tracking with multi-customer expense splitting, branded PDF quotes with photo attachments and follow-ups, customer CRM and Kanban follow-up pipeline, tax set-aside, invoicing and card payments via Stripe.
- Stripe Basic/Pro subscriptions end to end: checkout, customer portal, signed webhook verification, idempotent grant processing.
- Anthropic-powered assistant for natural-language job logging, pricing, and forecasting over live job and profit data.
- Google Maps routing in crew scheduling; Sentry edge and server monitoring wired before launch; resolved the first production billing incident; authored the release QA process (5+ documented rounds per release).

Lead Full Stack Engineer (Contract) · Animalia Apr 2026 – Jun 2026

Remote · Pet-wellness marketplace on headless Shopify. Built from zero; live storefront, pre-launch. animalia.market

- Sole engineer. Took the storefront from zero to live on Next.js 16, Tailwind 4, and TypeScript; 50+ brands merchandised.
- Typed facade over Shopify Storefront, Cart, and Admin APIs: one contract, three upstream systems, 33 GraphQL operations.
- Deterministic merchandising engine (~410 LOC): safety-filtered ingredient extraction, need-based copy transformation, revenue-weighted ranking. No model call at request time, so ranking is unit-testable and fast.
- AI product-photography pipeline: reads the catalog from the Admin API, generates brand-constrained images with fal.ai, writes them back.

Full Stack Engineer (Contract) · Strengthening the Saints Feb 2026 – Jun 2026

Remote · Multi-tenant church discipleship platform. Team build, in production.

- Full-stack engineer on a team build: 84 routes, 82 migrations, row-level security isolating each congregation, Google OAuth via Supabase Auth.
- Built the TipTap authoring experience for sermons and studies, including scripture verse insertion and text normalization.
- Shipped through CI: lint, typecheck, build, and Playwright smoke tests on every push.

Lead Full Stack & AI Engineer (Contract) · AI Blueprint Jan 2026 – Mar 2026

Remote · AI creative suite: six generation studios, 4K output. Built from zero; generating revenue. aiblueprintrt.com

- Primary engineer from first commit to production revenue. Live at aiblueprintrt.com.
- Six AI-powered creative studios (UGC, product, video, brand) in one subscription; identity-preserving image and video generation with 4K output via fal.ai prompt orchestration.
- Webhook-plus-polling dual-path job delivery: a missed provider callback never loses a generation.
- Atomic SQL credit ledger with non-negative constraints; credits held during generation and refunded automatically on failure.
- Idempotent Stripe webhooks and duplicate-subscription guards. Replayed events cannot double-charge or double-grant.

Lead Full Stack Developer & GTM Engineer (Contract) · Drip Oct 2025 – Dec 2025

Remote · San Diego, CA · Privacy-first relationship-wellness companion. Built from zero, solo, to investor-demo stage. drip.love

- Sole engineer, every commit: 98 API routes and 38 migrations. Took the product to investor-demo stage and owned go-to-market engineering alongside the build.
- Privacy enforced at three layers — data model, vector retrieval, and prompt — so neither partner can ever read the other's private memories.
- Dual-store memory (Supabase + Pinecone) with cross-store consistency; vector writes roll back on SQL failure.
- OpenAI structured-output engine: strict JSON schema, 3-attempt retry with backoff, conversation chaining.
- Human-in-the-loop operator console with a draft → approve → send state machine. No AI-drafted message reaches a user without human approval.

AI Automation Lead · Yorali USA 2023 – 2024

Boynton Beach, FL · On-site · Full-time.

- Cut customer acquisition cost 45% and manual process load 60% with custom AI sales tooling.
- Trained a team of 8 to 95% adoption; 30% lift in sales productivity.

Business Development Manager · 4D Global (Inc. 5000) 2023

Miami, FL · On-site · Full-time. Healthcare revenue operations.

- Improved appointment conversion 35% and qualified leads 25% through outbound automation.

EDUCATION

McFatter Technical College — Technical Degree, Computer Science & Network Support 2024

CERTIFICATIONS

Harvard Business School — CORe (Credential of Readiness): Analytics, Strategy & Management 2025

Stanford University School of Engineering — Strategic Planning Professional 2024

IBM — Python for Data Science, AI & Development Specialist 2024
