Senior Full Stack Engineer · AI & LLM Applications

dganuga@gmail.com linkedin.com/in/dev-ganuga-4b3b6431a github.com/DevGanuga initdev.co/talent/dev-ganuga

Senior Full Stack Engineer who owns production systems end to end: React and Next.js frontends, Node.js and Python backends, PostgreSQL, and LLM applications on OpenAI and Anthropic. Over the last year, built four startup products from zero to production as lead or sole engineer — two generating revenue, one live pre-launch, one at investor demo — and led full-stack delivery for Limpid&Co (Amsterdam), including a platform presented at Web Summit 2025.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React 19, Next.js (App Router, Server Components, Server Actions), TanStack Router, TanStack Query, TanStack Form, TanStack Table, Tailwind CSS, Framer Motion, TipTap, React Hook Form, Zod, Zustand

Backend & APIs: Node.js, Fastify, Next.js route handlers, Python, REST, GraphQL, OpenAPI specifications, contract-first API development, API code generation, signed and idempotent webhooks, background jobs and cron

Data: PostgreSQL (schema design, migrations, row-level security, performance tuning), Prisma, Drizzle ORM, Redis, NoSQL, Supabase, Pinecone vector search

AI / LLM (Artificial Intelligence): OpenAI and Anthropic APIs (GPT-4o, Claude), Gemini, LLM application architecture, RAG systems and embeddings, structured output and tool calling, streaming, retry/backoff and fallback design, agent workflows (LangGraph, n8n), PyTorch, generative image and video (fal.ai, Tavus), human-in-the-loop review systems

Event-Driven & Workflow Systems: Kafka, event-driven architecture, idempotent event processing, workflow-driven applications, operational consoles, enterprise business tooling

Identity & Security: OAuth 2.0, Azure AD, SSO, RBAC, Clerk, Supabase Auth, multi-tenant data isolation, PHI-aware data handling

DevOps & Observability: Docker, Kubernetes, Azure DevOps, ArgoCD, CI/CD pipelines, Vercel, OpenTelemetry, distributed tracing, Sentry, Playwright

Payments: Stripe (subscriptions, checkout, customer portal, tiered and usage-based pricing), credit ledgers with escrow and automatic refunds, idempotent webhook processing

Domain: Healthcare and regulated industries (clinical triage pipeline with PHI handling, healthcare revenue operations), compliance-aware system design, open-source ecosystems

EXPERIENCE

Senior Full Stack Engineer · Independent Contractor

2025 – Present

Remote · Contract full-stack and AI engineering; the engagements below were delivered through this practice.

- Built four startup products from zero to production as lead or sole engineer: two generating revenue, one live pre-launch, one at investor-demo stage.
- Led full-stack delivery for Limpid&Co (Amsterdam): AI Navigator, Company Challenges, and the Phase 2 production program that followed Web Summit 2025.

Lead Full Stack Engineer (Contract) · Limpid&Co

Oct 2025 – Jun 2026

Remote · Amsterdam, NL · AI Navigator, Company Challenges, and the Phase 2 production program for one enterprise client.

- Architected and shipped AI Navigator (navigator.leadingwith.ai), an enterprise AI-readiness platform on Next.js, TypeScript, and PostgreSQL: GPT-4o assistant with in-app tool calling, 25-zone sentiment engine over 1,000+ employee responses, 8-dimension maturity model with automated gap detection. Live in production; presented at Web Summit 2025.
- Shipped Company Challenges (companychallenges.com), an enterprise behavior-change platform: author-once, run-many cohort model, TipTap authoring, Stripe billing, Resend lifecycle email on Vercel cron. Wrote and won the Phase 2 production contract (scope, team, budget); fixed a PostgREST-regression outage the same day.

Full Stack Developer (Contract) · Dyia May 2026 – Jun 2026

Remote · AI business operating system for the trades. Built from zero; live with paying subscribers. dyia.io

- Built the production platform end to end on Next.js, TypeScript, PostgreSQL, and Stripe: real-profit job tracking with multi-customer expense splitting, branded PDF quote builder, customer CRM with follow-up pipeline, Google Maps crew routing, and a natural-language Anthropic assistant for logging, pricing, and forecasting.
- Launched Basic/Pro Stripe subscriptions (checkout, customer portal, signed webhooks, idempotent plan grants) to paying subscribers; wired Sentry before launch, resolved the first live billing incident, wrote the release QA process.

Lead Full Stack Engineer (Contract) · Animalia Apr 2026 – Jun 2026

Remote · Pet-wellness marketplace on headless Shopify. Built from zero; live storefront, pre-launch. animalia.market

- Sole engineer. Built the production storefront on Next.js 16, TypeScript, and Tailwind 4 with a typed facade over the Shopify Storefront, Cart, and Admin APIs: one contract, three upstream systems, 33 GraphQL operations.
- Built a deterministic merchandising engine (safety-filtered ingredient extraction, need-based copy, revenue-weighted ranking; no LLM at request time) and a fal.ai product-photography pipeline that writes assets back via the Admin API.

Full Stack Engineer (Contract) · Strengthening the Saints Feb 2026 – Jun 2026

Remote · Multi-tenant church discipleship platform. Team build, in production.

- Shipped production features on a live multi-tenant PostgreSQL platform (84 routes, 82 migrations, 200+ row-level security policies) that isolates each congregation's data; Google OAuth via Supabase Auth.
- Built TipTap authoring for sermons and studies with scripture insertion and text normalization; every push runs lint, typecheck, build, and Playwright smoke tests in CI.

Lead Full Stack & AI Engineer (Contract) · AI Blueprint Jan 2026 – Mar 2026

Remote · AI creative suite: six generation studios, 4K output. Built from zero; generating revenue. aiblueprintrt.com

- Built the production platform on Next.js 15, TypeScript, Supabase, fal.ai, Gemini, and Stripe: six AI studios, identity-preserving 4K avatar generation, and webhook-plus-polling job delivery so a missed callback never loses a job.
- Designed the credit economy and billing core: atomic SQL ledger with non-negative constraints (a race cannot create free generations), credits held during generation and auto-refunded on failure, idempotent Stripe webhooks, zero double-billing paths.

Lead Full Stack Developer & GTM Engineer (Contract) · Drip Oct 2025 – Dec 2025

Remote · San Diego, CA · Privacy-first relationship-wellness companion. Built from zero, solo, to investor-demo stage. drip.love

- Sole engineer, every commit (98 API routes, 38 migrations), and owner of go-to-market engineering through the investor demo. Built the full product on Next.js, TypeScript, Supabase, Pinecone, OpenAI, and Stripe: paired-partner companion experiences, invitation flow, check-in and nudge engine, human-in-the-loop operator console with a draft → approve → send state machine.
- Enforced privacy at three layers (data model, vector retrieval, prompt) so neither partner can read the other's memories; dual-store memory with cross-store rollback; OpenAI structured-output engine with strict schema and retry/backoff.

AI Automation Lead · Yorali USA 2023 – 2024

Boynton Beach, FL · On-site · Full-time.

- Cut customer acquisition cost 45% and manual process load 60% with custom AI sales tooling.
- Trained a team of 8 to 95% adoption; 30% lift in sales productivity.

Business Development Manager · 4D Global (Inc. 5000) 2023

Miami, FL · On-site · Full-time. Healthcare revenue operations.

- Improved appointment conversion 35% and qualified leads 25% through outbound automation.

EDUCATION

McFatter Technical College — Technical Degree, Computer Science & Network Support 2024

CERTIFICATIONS

Harvard Business School — CORe (Credential of Readiness): Analytics, Strategy & Management 2025

Stanford University School of Engineering — Strategic Planning Professional 2024

IBM — Python for Data Science, AI & Development Specialist 2024
