

Dev Ganugapenta

west palm beach, fl. remote (us)

senior product engineer, initdev. ai products, saas platforms, payments infrastructure.

dganuga@gmail.com linkedin.com/in/dev-ganuga-4b3b6431a github.com/DevGanuga initdev.co/hire

i'm the senior engineer initdev puts on its hardest builds. give me an ambiguous business problem and you get back a live platform. my specialty is the hard seam in modern software: putting probabilistic ai systems into production where money, privacy or clinical data is on the line. billing that survives failure, llm pipelines built for the reality that models time out and return garbage, multi-tenant postgres locked down with row-level security. 1,197 github contributions in the last twelve months, 96% of them shipped commits. every entry below is live, client-billed or investor-facing. none of it is a demo.

core expertise

ai engineering: llm integration (openai, anthropic claude), schema-enforced structured output, retrieval-augmented memory (pinecone, embeddings), human-in-the-loop design, agent workflows (langgraph, n8n), multimodal pipelines (tavus video, fal.ai image generation)

payments and billing: stripe subscriptions, idempotent webhook processing, atomic credit-ledger economies, escrowed spend with automatic refunds on failure, customer portal, tiered pricing

platform: typescript, next.js app router, react, node.js, postgresql (supabase, rls), redis, rest and graphql api design, shopify headless commerce, vercel edge and cron, sentry, ci/cd

experience

dyia, lead engineer

2025 - present

initdev studio. field-service saas. live in production with paying subscribers. [live](#) / [source](#) / [deep dive](#)

- took it from zero to revenue. tiered stripe subscriptions with signed webhook verification and idempotent plan grants.
- anthropic-powered business intelligence over live job and profit data. google maps dispatch for crews.
- sentry across edge and server runtimes. documented qa packs gate every release, 5 rounds and counting.

animalia, sole engineer

dec 2025 - present

initdev studio. headless shopify marketplace for pet wellness. storefront live, pre-launch. [live](#) / [source](#) / [deep dive](#)

- typed domain layer unifying shopify storefront, cart and admin apis across 33 graphql operations.
- deterministic merchandising engine that turns raw supplier catalog text into ranked, revenue-weighted storefront copy. no llm in the hot path, fully testable.
- ai product photography pipeline that pulls from the admin api, generates brand-constrained imagery and writes back automatically.

ai navigator, lead engineer

oct 2025 - present

client contract via initdev. enterprise ai readiness platform. live, phase 2 now in development under contract. [live](#) / [deep dive](#)

- gpt-4o chat with action execution, a 25-zone organizational sentiment heatmap and a capability maturity framework.
- authored the phase 2 production proposal myself: team structure, milestones, financials.

company challenges, sole engineer

jan 2026 - jun 2026

client contract via initdev. enterprise learning platform. live, invoiced, delivered. [live](#) / [deep dive](#)

- reusable content architecture: author a challenge once, deploy it across unlimited cohorts with no duplication.
- tiptap rich content editing across 73 source files. vercel cron lifecycle emails.
- when a supabase upgrade silently broke aggregate queries in production, i found the postgres regression and shipped the fix within hours.

ai blueprint, primary engineer

nov 2025 - mar 2026

initdev studio. multi-studio ai creative platform. active, revenue-generating. [deep dive](#)

- real-money credit economy: atomic sql spend under non-negative constraints, credits escrowed during generation, automatic refunds when a model fails.
- idempotent stripe webhooks. replayed events cannot double-charge or double-grant. billing stays correct even when the ai does not.
- identity-preserving image generation on fal.ai with webhook plus polling dual-path delivery, so a missed callback never loses a job.

convoai studio, primary engineer

nov 2025 - mar 2026

initdev studio. real-time ai video platform with a clinical triage pipeline. [source](#) / [deep dive](#)

- built the full tavus api v2 integration layer. 672-line typed client: personas, replicas, conversations, live webhook event routing.
- clinical pipeline: video conversation into claude structured symptom extraction, into a generated pdf report, into automated delivery.
- dual-path completion with deduplication, because third-party event delivery cannot be trusted in a clinical context.

drip, sole engineer

apr 2025 - feb 2026

initdev studio. privacy-first ai relationship companion. investor-demo ready. 528 commits on the production app, sole author. [deep dive](#)

- hard privacy constraint: two partners share one ai companion and neither can ever see the other's memories. enforced at the data model, the pinecone retrieval layer and the prompt.
- dual-store memory, postgres plus pinecone, with rollback on failure so a write never lands in one store without the other.
- openai conversation engine: strict json-schema output, 3-attempt backoff, conversation chaining. 98 api routes, 38 migrations.
- human-in-the-loop operator console. every ai-drafted message passes a draft, approve, send state machine before it reaches a user.

inflio, sole engineer

jun 2025 - feb 2026

independent build. production-scale ai video platform. closed after market validation. [source](#)

- 399 typescript files, 119k lines, built solo. clip generation, transcription, subtitle editing, multi-platform scheduling and publishing.
- made the commercial call to shut it down, then did it properly: 14,600 lines of dead code removed, clean 27-second build.

consulting engineer, ai and full-stack

2025 - present

upwork, top rated plus (top 3% performer tier). 100% job success score. every completed engagement rated 5.0. [verified history](#)

- enterprise saas hardening and multi-user rollout, full-stack ownership for a dtc startup, an automated ai content repurposing system on long-term retainer, and ai sales-agent infrastructure on n8n and gohighlevel.
- client words, not mine: "an expert at modern development." "going above and beyond to take care of any details along the way."

ai automation lead

2023 - 2024

yorali usa, boynton beach fl. full-time. owned ai sales automation across the company.

- cut customer acquisition costs 45% and manual process load 60% with custom tooling held at 99.8% uptime.
- trained a team of 8 to 95% adoption and a 30% lift in sales productivity.

business development manager

2023

4d global, an inc. 5000 company, miami fl. full-time. healthcare revenue operations.

- systematized outbound and appointment booking: 35% more successful appointments, 25% growth in qualified leads, 20% cost reduction through vendor negotiation.

education and credentials

harvard business school, credential of readiness: analytics, strategy & management	2025
mcfatter technical college, technical degree, computer science and network support services	2024
stanford university school of engineering, strategic planning professional	2024
ibm, python for data science, ai and development specialist	2024
