INITDEV · TECHNICAL PORTFOLIO

Strengthening the Saints

A multi-tenant, church-first discipleship platform — Bible study, discipleship plans, and church-owned content distribution — on Next.js 16 + Supabase.

Dev Ganugapenta · Founder, InitDev · Full technical showcase: `portfolio-showcase/sts-technical-showcase.pdf`

PAGE ROUTES	SERVER ACTIONS	RLS POLICIES	DB MIGRATIONS

Counts reproducible from `report-data.json`. `tsc` and `next build` pass clean (VERIFIED).

What it is

Three products in one authorization model: a deep **Bible reader** (translations, interlinear Greek/Hebrew, word-level highlights, cross-refs, audio, verse-linked notes), a **discipleship-plan system** (typed modules, multi-run enrollment, cohorts, shared reflections), and a **church operations layer** (onboarding, verification/triage, role-based dashboards, ownership-aware distribution). Built for disciples, shepherds, and HQ operators.

Strongest technical accomplishments

- **Ownership-aware distribution graph** — visibility→token-type policy, viral parent/child lineage, idempotent redemption, RLS-enforced publication states.
- **Offline-first sermon notes** — IndexedDB drafts + optimistic-lock cloud sync with conflict retry + pending-insert queue.
- **Interlinear alignment** — multi-signal English↔Greek/Hebrew word mapping heuristic in TypeScript.
- **API.Bible USX parser** — publisher HTML → structured blocks preserving poetry & red-letter runs.
- **Multi-tenant authorization** — platform + group role models, 204 RLS policies, service-role trust boundary.
- **Zero-regression dark-mode retrofit** — CSS-variable token engine + no-flash SSR, verified in-browser.

Architecture & stack

Next.js 16 (App Router, RSC + Server Actions) · Supabase (Postgres + RLS + Auth + Storage) · TipTap 3 · Zustand · Zod · Upstash rate limiting · API.Bible · Tailwind 4. CI: lint → typecheck → build → Playwright smoke.

Verified proof points

- Type-checks and builds clean (exit 0).
- 204 RLS policies + documented security remediation.
- 48 tables, 33 SQL functions across 82 migrations.

Target roles

Senior full-stack · **Product engineer** · **Founding engineer** · **Technical lead / architect** · **Solutions / platform**

Multi-contributor repo; authorship to confirm. Business metrics unverified.
