# Dev Ganugapenta

West Palm Beach, FL · Remote (US)

**Senior Software Engineer · Full-Stack & AI Applications**

dganuga@gmail.com linkedin.com/in/dev-ganuga-4b3b6431a github.com/DevGanuga

initdev.co/talent/available/dev-ganuga

---

Senior software engineer specializing in full-stack and AI applications. Shipped nine production platforms in a year at InitDev for startup and enterprise clients: LLM systems architected for model failure, Stripe billing that stays correct through webhook replay, and multi-tenant Postgres with row-level security. Owns products end to end, from domain model to production.

## SKILLS

**Languages:** TypeScript, JavaScript, SQL, Python

**AI / LLM:** OpenAI GPT-4o, Anthropic Claude, Pinecone embeddings, fal.ai, Tavus, agent workflows (LangGraph, n8n)

**Frontend:** React, Next.js (App Router), Tailwind CSS, Framer Motion

**Backend & Data:** Node.js, PostgreSQL, Supabase (row-level security), REST, GraphQL (Shopify)

**Payments:** Stripe subscriptions, idempotent webhook processing, atomic credit ledgers

**DevOps & Observability:** Vercel, CI/CD, Sentry, Playwright, Google Maps API

## EXPERIENCE

### Lead Engineer · AI Navigator — Leading with AI, a Limpid&Co division (client via InitDev)

Oct 2025 – Jun 2026

Enterprise AI readiness platform, delivered and live in production. navigator.leadingwith.ai

- Built a GPT-4o assistant with in-app action execution: the model navigates the platform and runs analyses on the user's behalf rather than only answering questions.
- Designed a 25-zone sentiment engine scoring 5 resistance reasons against 5 discomfort levels across 1,000 employee survey responses, surfacing where AI adoption stalls and why.
- Implemented an 8-dimension capability maturity model scored against industry benchmarks with automated gap detection.
- Delivered Phase 1 on contract for a client presenting at Web Summit 2025; platform is live in production.
- Authored the winning Phase 2 production proposal, including team structure and financials.

### Lead Engineer · Dyia (InitDev)

May 2026 – Jun 2026

Field-service SaaS, live with paying subscribers. dyia.io

- Shipped a field-service SaaS to live revenue across 70 API routes: dispatch, invoicing, and job profitability in one system.
- Built tiered Stripe subscriptions with signed webhook verification and idempotent plan grants.
- Integrated Anthropic-powered business intelligence reading live job and profit data.
- Instrumented Sentry across edge and server runtimes; diagnosed and resolved a live billing incident end to end.
- Documented the release QA process that now gates every InitDev studio build.

### Sole Engineer · Animalia (InitDev)

Apr 2026 – Jun 2026

Headless Shopify storefront for pet wellness. animalia.market

- Built a typed domain layer unifying Shopify Storefront, Cart, and Admin APIs across 33 GraphQL operations.
- Designed a deterministic merchandising engine ranking catalog copy by revenue weight; keeping the LLM out of the render path made ranking fully unit-testable and fast.
- Built an AI product photography pipeline that reads the Admin API, generates brand-constrained imagery with fal.ai, and writes results back to the catalog.
- Storefront live and pre-launch on Next.js 16, Tailwind 4, and TypeScript.

**Sole Engineer · Company Challenges — Limpid&Co (client via InitDev)** Apr 2026 – Jun 2026

Enterprise learning platform, delivered and invoiced. companychallenges.com

- Built a reusable content architecture separating authored material from cohort instances: author once, run across unlimited cohorts.
- Implemented TipTap rich content editing across 73 source files and lifecycle email automation on Vercel cron.
- Owned production incident response: traced an aggregate-query failure to a PostgREST regression after a Supabase upgrade and shipped the fix within hours of it surfacing.
- Delivered and invoiced with Stripe billing and Resend transactional email.

**Platform Engineer · Strengthening the Saints (InitDev, team build)** Feb 2026 – Jun 2026

Church discipleship platform: 84 routes, 161 server actions, 204 RLS policies, 82 migrations.

- Contributed across a team-built platform at real scale: 84 routes, 161 server actions, and 204 row-level security policies across 82 migrations.
- Multi-tenant Postgres architecture where data ownership is an architectural requirement: each congregation owns its own data and shepherding workflows.
- Built TipTap authoring for sermons and studies with scripture verse insertion and text normalization.
- Shipped through a CI pipeline running lint, typecheck, build, and Playwright smoke tests on every push, with documented security remediation.

**Primary Engineer · AI Blueprint (InitDev)** Jan 2026 – Mar 2026

Multi-studio AI creative platform with a real-money credit economy. Shipped, revenue.

- Designed an atomic SQL credit ledger under a non-negative constraint, so the ledger cannot go negative under concurrent spend.
- Built escrowed credit spend: credits are held during AI generation and automatically refunded when a model fails, so customers never pay for failed output.
- Implemented idempotent Stripe webhook processing with duplicate-subscription guards: replayed events cannot double-charge or double-grant.
- Shipped to revenue on Next.js 15, Supabase, fal.ai, and Clerk. Billing stays correct even when the AI does not.

**Sole Engineer · Inflio (InitDev)** Jun 2025 – Feb 2026

AI video repurposing platform. 119k lines authored solo, wound down after validation.

- Sole engineer for eight months across 399 TypeScript files and 119k lines: clip generation, transcription, subtitle editing, and scheduling.
- Built multi-platform publishing across the major social destinations from a single pipeline.
- Validated the build, not the market; made the shutdown call and executed it properly: 14,600 lines of dead code removed, a clean 27-second build left behind.

**Primary Engineer · ConvoAI Studio (InitDev)** Nov 2025 – Jan 2026

Real-time AI video platform with a clinical triage pipeline.

- Built a full Tavus API v2 integration layer: personas, replicas, conversations, and live webhook event routing.
- Implemented Claude structured symptom extraction feeding generated PDF reports and automated delivery.
- Designed dual-path completion with deduplication because third-party delivery cannot be trusted clinically: a missed callback degrades to polling instead of losing the report.
- Delivery guarantees hold in both directions: the patient never misses a report and never receives it twice.

**Sole Engineer · Drip (InitDev)** Oct 2025 – Dec 2025

Privacy-first AI relationship companion. Investor-demo ready.

- Sole author of 528 commits across 98 API routes and 38 migrations in a three-month build.
- Designed dual-store memory: Postgres for structured data and Pinecone for semantic recall, with cross-store rollback on partial failure.
- Enforced privacy with ownership-scoped embedding filters at the query layer, not just the prompt: two partners share one AI companion and can never read each other's memories.
- Built a human-in-the-loop operator console: every AI-drafted message passes draft, approve, send before reaching a user.

**Consulting Engineer · Upwork — Top Rated Plus** 2025 – Present

100% Job Success. AI SaaS, full-stack, and automation engagements.

- Delivered enterprise SaaS hardening, DTC full-stack builds, and AI automation engagements for US clients.
- Top Rated Plus standing with 100% Job Success; every completed engagement rated 5.0.

**AI Automation Lead · Yorali USA** 2023 – 2024

Boynton Beach, FL. Full-time.

- Cut customer acquisition cost 45% and manual process load 60% with custom AI sales tooling.
- Trained a team of 8 to 95% adoption; 30% lift in sales productivity.

**Business Development Manager · 4D Global (Inc. 5000)** 2023

Miami, FL. Full-time. Healthcare revenue operations.

- Improved appointment conversion 35% and qualified leads 25% through outbound automation.

## EDUCATION & CERTIFICATIONS

**Harvard Business School** — Credential of Readiness: Analytics, Strategy & Management 2025

**McFatter Technical College** — Technical Degree, Computer Science & Network Support 2024

**Stanford University School of Engineering** — Strategic Planning Professional 2024

**IBM** — Python for Data Science, AI & Development Specialist 2024
