Dev Ganugapenta

West Palm Beach, FL · Remote (US)

Senior Software Engineer · Full-Stack & AI Applications

dganuga@gmail.com linkedin.com/in/dev-ganuga-4b3b6431a github.com/DevGanuga
initdev.co/talent/available/dev-ganuga

Senior software engineer specializing in full-stack and AI applications. Shipped nine production platforms in a year at InitDev for startup and enterprise clients: LLM systems architected for model failure, Stripe billing that stays correct through webhook replay, and multi-tenant Postgres with row-level security. Owns products end to end, from domain model to production.

SKILLS

Languages: TypeScript, JavaScript, SQL, Python

AI / LLM: OpenAI GPT-4o, Anthropic Claude, Pinecone embeddings, fal.ai, Tavus, agent workflows (LangGraph, n8n)

Frontend: React, Next.js (App Router), Tailwind CSS, Framer Motion

Backend & Data: Node.js, PostgreSQL, Supabase (row-level security), REST, GraphQL (Shopify)

Payments: Stripe subscriptions, idempotent webhook processing, atomic credit ledgers

DevOps & Observability: Vercel, CI/CD, Sentry, Playwright, Google Maps API

EXPERIENCE

Lead Engineer · AI Navigator — Leading with AI, a Limpid&Co division (client via InitDev)

Oct 2025 – Jun 2026

Enterprise AI readiness platform, delivered and live in production. navigator.leadingwith.ai

- Built a GPT-4o assistant that executes in-app navigation and analysis actions, plus a 25-zone sentiment engine scoring resistance reasons against discomfort levels across 1,000 employee responses.
- Delivered Phase 1 for a client presenting at Web Summit 2025; authored the Phase 2 production proposal, team structure and financials included, and won it.

Lead Engineer · Dyia (InitDev)

May 2026 – Jun 2026

Field-service SaaS, live with paying subscribers. dyia.io

- Owned end-to-end delivery across 70 API routes: tiered Stripe subscriptions with signed webhook verification and idempotent plan grants, Anthropic-powered business intelligence, and Google Maps crew dispatch.
- Resolved a live billing incident end to end in production and wrote the release QA process that now gates every InitDev studio build.

Sole Engineer · Animalia (InitDev)

Apr 2026 – Jun 2026

Headless Shopify storefront for pet wellness. animalia.market

- Built a typed domain layer unifying Shopify Storefront, Cart, and Admin APIs across 33 GraphQL operations.
- Designed a deterministic merchandising engine, no LLM in the page render path, plus an AI product photography pipeline that writes back through the Admin API.

Sole Engineer · Company Challenges — Limpid&Co (client via InitDev)

Apr 2026 – Jun 2026

Enterprise learning platform, delivered and invoiced. companychallenges.com

- Built a reusable content architecture: author a challenge once, run it across unlimited cohorts without duplicating content.
- Traced a production aggregate-query failure to a PostgREST regression after a Supabase upgrade and shipped the fix within hours.

Platform Engineer · Strengthening the Saints (InitDev, team build)

Feb 2026 – Jun 2026

Church discipleship platform: 84 routes, 161 server actions, 204 RLS policies, 82 migrations.

- Contributed across a multi-tenant Postgres platform with row-level security (204 policies) so each congregation owns its own data and shepherding workflows.
- Built TipTap authoring with scripture insertion; CI runs lint, typecheck, build, and Playwright smoke tests on every push.

Primary Engineer · AI Blueprint (InitDev) Jan 2026 – Mar 2026

Multi-studio AI creative platform with a real-money credit economy. Shipped, revenue.

- Designed an atomic SQL credit ledger under a non-negative constraint, with credits escrowed during generation and automatically refunded when a model fails.
- Implemented idempotent Stripe webhooks and duplicate-subscription guards: replayed events cannot double-charge or double-grant.

Sole Engineer · Inflio (InitDev) Jun 2025 – Feb 2026

AI video repurposing platform. 119k lines authored solo, wound down after validation.

- Sole engineer across 399 TypeScript files and 260 commits: clip generation, transcription, subtitle editing, and multi-platform publishing.
- Wound the product down after market validation with a documented close-out: removed 14,600 lines of dead code and left a clean 27-second build.

Primary Engineer · ConvoAI Studio (InitDev) Nov 2025 – Jan 2026

Real-time AI video platform with a clinical triage pipeline.

- Built a typed Tavus API v2 integration layer (personas, replicas, conversations, live webhook routing) and Claude structured symptom extraction into generated PDF reports.
- Designed dual-path completion with deduplication: a missed third-party callback degrades to polling instead of losing a patient report, and dedup guarantees it is never delivered twice.

Sole Engineer · Drip (InitDev) Oct 2025 – Dec 2025

Privacy-first AI relationship companion. Investor-demo ready.

- Sole author of 528 commits across 98 API routes and 38 migrations: dual-store memory (Postgres + Pinecone) with ownership-scoped retrieval so partners can never read each other's memories.
- Built a human-in-the-loop operator console: every AI-drafted message passes draft, approve, send before reaching a user.

Consulting Engineer · Upwork — Top Rated Plus 2025 – Present

100% Job Success. AI SaaS, full-stack, and automation engagements.

- Delivered enterprise SaaS hardening, DTC full-stack builds, and AI automation engagements.
- Every completed engagement rated 5.0.

AI Automation Lead · Yorali USA 2023 – 2024

Boynton Beach, FL. Full-time.

- Cut customer acquisition cost 45% and manual process load 60% with custom AI sales tooling.
- Trained a team of 8 to 95% adoption; 30% lift in sales productivity.

Business Development Manager · 4D Global (Inc. 5000) 2023

Miami, FL. Full-time. Healthcare revenue operations.

- Improved appointment conversion 35% and qualified leads 25% through outbound automation.
