Dev Ganugapenta · Founder, InitDev · Brand: NR8R (Narrator Studio)

INTERNAL DEMO + CLINICAL INTAKE PLATFORM

Next.js 16 · Supabase · Tavus · Claude · Resend

VALUE PROPOSITION

NR8R operators configure branded Tavus AI-replica demos, share 24-hour links, and - on the Flo path - convert live video intakes into physician-ready chest-pain PDFs.

OWNERSHIP

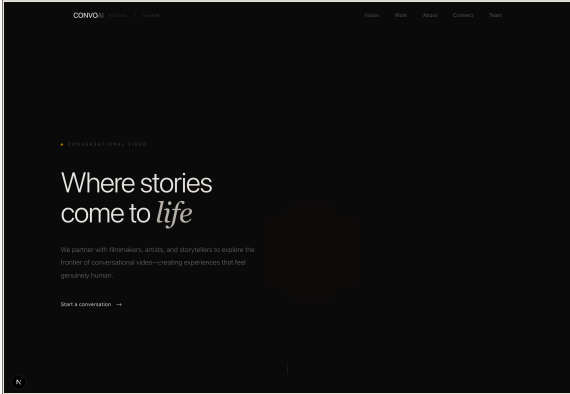

Primary author across 42 commits from scaffold through clinical reporting (git: Dev Ganuga). Full-stack ownership of UI, APIs, schema, webhooks, and AI extraction.

STRONGEST ACCOMPLISHMENTS

- End-to-end clinical intake pipeline (transcript → Claude → PDF → email) with send dedup.
- Dual-path session completion (client, beacon, Tavus webhooks) hardened after event-shape failures.
- White-label project control plane with persona/replica binding and time-boxed demo sessions.
- Typed Tavus API client + Supabase RLS data model for demo ops.
- Operator dashboard and branded public viewer shipped as one coherent product.

TARGET ROLES

Founding engineer · AI application engineer · Senior full-stack · Product engineer · Solutions architecture

AUTO TESTS

FAIL

LINT (35)

Architecture: Public demo viewer + team admin + API layer; Tavus video; Claude extraction; Resend delivery; Supabase persistence.

Known gap: /api/admin/send-report lacks auth; perception analysis only PARTIAL on automated PDF path.
